

What is Milkiwean Yoghurt?

- A unique supplementary milk for young piglets
- Contains 3 x higher dry matter than regular milk replacers
- Formulated to support digestive function and specifically designed to avoid over consumption
- Highly palatable and digestible

Using Milkiwean Yoghurt

- Ensure all piglets consume sufficient colostrum
- Begin supplying yoghurt in small amounts 12 hours after farrowing is completed
- Feed 2 x daily, ensuring good hygiene of feeding bowls
- May also be used in automatic milk supply systems
- Gradually increase supply as piglets grow, ensuring bowls are emptied every 24 hours
- From day 14 solid creep may be gradually introduced

LIFESTART SETS LIFE PERFORMANCE

During the critical window of opportunity at the start of life, only LifeStart offers the science, solutions and applications to unleash the full potential of a piglet. Milkiwean Yoghurt is fully endorsed for use in the LifeStart programme to help deliver substantial benefits in lifetime performance.

Milkiwean Yoghurt

The unique supplementary milk for suckling piglets

The benefits of Milkiwean Yoghurt

- Higher dry matter intake
- Increased weaning weights
- More piglets weaned per litter
- More uniform piglets
- Reduced days to slaughter

Higher performance

Higher profitability

Feeding schedule

Age	Feeds per day	Amount per litter per feed
Day 1*	1	75 – 125 ml
Day 2	2	150 – 200 ml
Day 3-4	2	200 – 300 ml
Day 5-8	2	400 – 600 ml
Day 9-11	2	750 ml – 1.25 l
Day 12-14	1	1 – 1.5 l

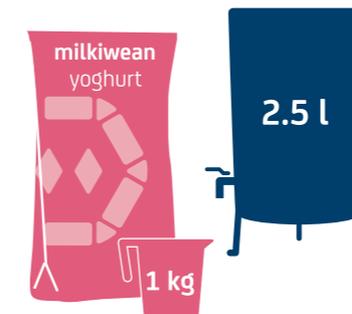

* Day 1 = day of birth. Start feeding from 12 hours after birth.

Note: The feeding schedule is a guideline. Lower the volume when piglets do not take in full amount; raise the volume when intake is good. The daily ration depends on several management factors such as the sow's milk production, the climate and litter size.

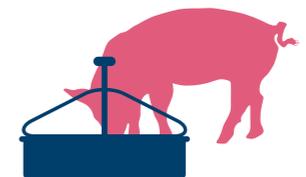

Top tips

- For weak and small piglets at farrowing, Milkiwean Yoghurt can be administered in a syringe to boost vitality.
- To increase initial post weaning feed intake, Milkiwean Yoghurt can be used as a top dressing over the weaning diet which helps enhance palatability.

Preparation

Dissolve Milkiwean Yoghurt at a ratio of 1 : 2.5, i.e. 1 kg powder + 2.5 l lukewarm water (45°C).

A piglet bowl stimulates feed intake. Milkiwean Yoghurt is suitable for manual and automatic feeding.
